

Indoor air quality is a widely spread problem

Indoor air pollution is considered to be a no. 1 environmental health problem. Tightly sealed buildings and homes may be more energy efficient but can trap pollutants and microbes indoors causing odours, mould, allergies, and illness.

The Clean Air PHI technology has proven to drastically reduce airborne odors, mould, bacteria and viruses (in the 90+ percentile).

Easy to use and stylish – from homes to offices and schools

- Clean Air Micro is perfect for private use, small offices, waiting rooms, patient rooms etc.
- Clean Air Mini is suitable for somewhat larger spaces: offices, classrooms, entrance halls, basements, etc.

Clean Air Micro and Mini units are either stand-alone or easily mountable on walls. Just plug in to a power outlet and start enjoying cleaner indoor air.

- For more information on how the PHI system works, see our PHI leaflet.
- See also our Bacteria Reader to find out how the PHI system reduces airborne smoke, mildew/mould, odours, bacteria, viruses, and VOC's.

Technical specifications	Clean Air Micro	Clean Air Mini
Method of production	PHI™	PHI™
Cells	5" cell	5" cell with catalyst
Ventilator	45m ³ /hour	45m ³ /hour
Voltage	12 Volt with 230 Volt adapter	230 Volt
Amps	0,2	0,5
Controls	off/medium/high	off/medium/high
Dimensions hxdxw	10x10x39/25 cm	16x16x44/30 cm
Weight	1,5 kg	5 kg
Material	Aluminium	Stainless steel
Filters	no	on requestVOC/dust/grease/radon/mercury
Capacity*	7x7x2,50m ² /125 m ³	8x8x2,5m ² /160 m ³

*depends on the organic load **supplier reserves the right to technical modifications without further notice
