

CHICAGO PUBLIC SCHOOLS INSTALL RGF'S GUARDIAN AIR PRODUCTS TO INCREASE ATTENDANCE

Ormand Park, IL. April 2007

In February of this year, PS 135 began the installation of 58 Guardian Air units to assist in reducing absenteeism due to illness. During a meeting in January of 2006 members of the school district met with officials from RGF and G. W. Berkhiemer to discuss ongoing problems with the air quality in the school.

Like many older schools there were many complaints regarding the air quality. The most common were mold and musty odors and teachers complaining of being uncomfortable in certain rooms. The RGF factory personnel explained the unique approach to air quality that the Guardian Air family of products provides. That is, it's ability to kill microbes (mold, bacteria and viruses) in the conditioned space instead of trying to kill them in the air handler. They also shared with the members of the school district the fact that Disney Cruise lines had installed them in all of their cruise ships to protect the passengers from the Norwalk Virus. During the discussion, RGF shared with the school district the results of a test done by Midwest Research Institute (MRI), where the Guardian Air achieved a kill rate on Norwalk Virus of 99.9999% in a series of one hour tests. It is important to note that the Norwalk Virus is the cause of 54% of all the stomach flu Americans suffer each year.

The school district decided to try the product and would phase it in during class room modifications to be done in spring of 2007. As part of the project, the school decided to run preliminary studies on the effect on absenteeism verses the same period a year earlier. The results showed that with the Guardian Air units installed, the absenteeism fell by 15-20%. This is a very important point for all school districts as they receive their federal and state funding based on daily attendance records. So the more students in school, the more funding they receive. In essence, PS 135 got an increase in their funding of 15-20%.

This information should be interesting to any of your customers who have responsibility for areas where people gather in groups. Such as, assisted living facilities, universities, day care centers (both children as well as seniors), hotels and meeting facilities, work related assembly areas, government buildings, churches, shopping areas, restaurants, and of course schools,

If you would like copies of the MRI test on Norwalk Virus to share with your customers, please contact your RGF wholesaler.
